4	Z-transform	2
5	Impulse Response	3

Abstract—This manual provides a simple introduction to digital signal processing.

1 Software Installation

Run the following commands

sudo apt-get update sudo apt-get install libffi-dev libsndfile1 python3 -scipy python3-numpy python3-matplotlib sudo pip install cffi pysoundfile

2 Digital Filter

2.1 Download the sound file from

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/ Sound-Files/Sound Noise.way

- 2.2 You will find a spectrogram at https: //academo.org/demos/spectrum-analyzer. Upload the sound file that you downloaded in Problem 2.1 in the spectrogram and play. Observe the spectrogram. What do you find?

 Solution: There are a lot of yellow lines between 440 Hz to 5.1 KHz. These represent the synthesizer key tones. Also, the key strokes are
- 2.3 Write the python code for removal of out of band noise and execute the code.Solution:

audible along with background noise.

import soundfile as sf
from scipy import signal

#read .wav file
input_signal,fs=sf.read('Sound_Noise.wav')

#sampling frequency of Input signal sampl freq=fs

#order of filter order=4

#cutoff frequency 4kHz cutoff freq=4000.0

#digital frequency Wn=2*cutoff_freq/sampl_freq

#b and a are numerator and denominator polynomials respectively b,a=signal.butter(order,Wn,'low')

#filter the input signal with butterworth filter output_signal=signal.filtfilt(b,a,input_signal)

#output_signal=signal.lfilter(b,a,input_signal
)

#write the output signal into .wav file
sf.write('Sound_With_ReducedNoise.wav',
 output_signal, fs)

2.4 The output of the python script Problem 2.3 is the audio file Sound With ReducedNoise.wav. Play the file in the spectrogram in Problem 2.2. What do you observe?

Solution: The key strokes as well as background noise is subdued in the audio. Also, the signal is blank for frequencies above 5.1 kHz.

3 DIFFERENCE EQUATION

3.1 Let

$$x(n) = \left\{ 1, 2, 3, 4, 2, 1 \right\} \tag{3.1}$$

Sketch x(n).

3.2 Let

$$y(n) + \frac{1}{2}y(n-1) = x(n) + x(n-2),$$

$$y(n) = 0, n < 0 \quad (3.2)$$

Sketch y(n).

Solution: The following code yields Fig. 3.2.

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/Code /xnyn.py

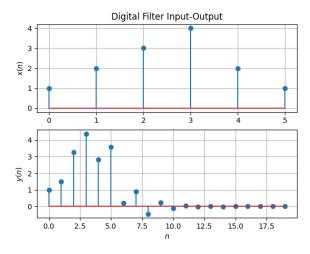

Fig. 3.2

4 Z-TRANSFORM

4.1 The Z-transform of x(n) is defined as

$$X(z) = \mathbb{Z}\{x(n)\} = \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
 (4.1)

Show that

$$Z{x(n-1)} = z^{-1}X(z)$$
 (4.2)

and find

$$\mathcal{Z}\{x(n-k)\}\tag{4.3}$$

Solution: From (4.1),

$$Z\{x(n-k)\} = \sum_{n=-\infty}^{\infty} x(n-1)z^{-n}$$

$$= \sum_{n=-\infty}^{\infty} x(n)z^{-n-1} = z^{-1} \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
(4.4)
$$(4.5)$$

resulting in (4.2). Similarly, it can be shown that

$$Z\{x(n-k)\} = z^{-k}X(z)$$
 (4.6)

4.2 Find

$$H(z) = \frac{Y(z)}{X(z)} \tag{4.7}$$

from (3.2) assuming that the Z-transform is a linear operation.

Solution: Applying (4.6) in (3.2),

$$Y(z) + \frac{1}{2}z^{-1}Y(z) = X(z) + z^{-2}X(z)$$
 (4.8)

$$\implies \frac{Y(z)}{X(z)} = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \tag{4.9}$$

4.3 Find the Z transform of

$$\delta(n) = \begin{cases} 1 & n = 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.10)

and show that the Z-transform of

$$u(n) = \begin{cases} 1 & n \ge 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.11)

is

$$U(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1 \tag{4.12}$$

Solution: It is easy to show that

$$\delta(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} 1 \tag{4.13}$$

and from (4.11),

$$U(z) = \sum_{n=0}^{\infty} z^{-n}$$
 (4.14)

$$= \frac{1}{1 - z^{-1}}, \quad |z| > 1 \tag{4.15}$$

using the formula for the sum of an infinite geometric progression.

4.4 Show that

$$a^{n}u(n) \stackrel{Z}{\rightleftharpoons} \frac{1}{1 - az^{-1}} \quad |z| > |a|$$
 (4.16)

Solution: Z-transform of $a^n u(n)$ would be:

$$U(z) = \sum_{n=0}^{\infty} a^n z^{-n}$$
 (4.17)

$$\implies U(z) = \sum_{n=0}^{\infty} \left(\frac{z}{a}\right)^{-n} \tag{4.18}$$

$$\therefore U(z) = \frac{1}{1 - az^{-1}} \tag{4.19}$$

4.5 Let

$$H(e^{j\omega}) = H(z = e^{j\omega}).$$
 (4.20)

Plot $|H(e^{j\omega})|$. Comment. $H(e^{j\omega})$ is known as the *Discret Time Fourier Transform* (DTFT) of x(n).

Solution: The following code plots Fig. 4.5.

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/Code /dtft.py **Solution:** From (4.9),

$$H(z) = \frac{1}{1 + \frac{1}{2}z^{-1}} + \frac{z^{-2}}{1 + \frac{1}{2}z^{-1}}$$
 (5.2)

$$\implies h(n) = \left(-\frac{1}{2}\right)^{n} u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2)$$
(5.3)

using (4.16) and (4.6).

5.2 Sketch h(n). Is it bounded? Convergent? **Solution:** The following code plots Fig. 5.2.

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/Code /hn.py

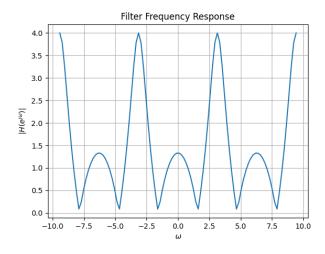

Fig. 4.5: $|H(e^{j\omega})|$

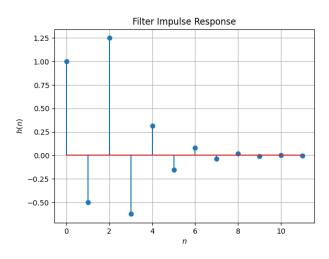

Fig. 5.2: h(n) as the inverse of H(z)

5 Impulse Response

5.1 Find an expression for h(n) using H(z), given that

$$h(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} H(z) \tag{5.1}$$

and there is a one to one relationship between h(n) and H(z). h(n) is known as the *impulse* response of the system defined by (3.2).

h(n) is convergent and converges to 0

5.3 The system with h(n) is defined to be stable if

$$\sum_{n=-\infty}^{\infty} h(n) < \infty \tag{5.4}$$

Is the system defined by (3.2) stable for the

impulse response in (5.1)? **Solution:**

$$u(n) = \begin{cases} 1 & n \ge 0 \\ 0 & n < 0 \end{cases}$$
 (5.5)

$$u(n-2) = \begin{cases} 1 & n \ge 2 \\ 0 & n < 2 \end{cases}$$
 (5.6)

$$h(n) = \begin{cases} 0 & n < 0 \\ \left(\frac{-1}{2}\right)^n & 0 \le n < 2 \\ \left(\frac{-1}{2}\right)^n + \left(\frac{-1}{2}\right)^{(n-2)} & n \ge 2 \end{cases}$$
(5.7)

$$\therefore \sum_{n=-\infty}^{\infty} h(n) = 0 + 1 + \frac{-1}{2} + \sum_{n=2}^{\infty} \left[\left(\frac{-1}{2} \right)^n + \left(\frac{-1}{2} \right)^{(n-2)} \right]$$
(5.8)

$$= \frac{1}{2} + \frac{5}{4} * \left(\frac{2}{3}\right) = \frac{4}{3} < \infty \tag{5.9}$$

(5.10)

: system defined is stable

5.4 Compute and sketch h(n) using

$$h(n) + \frac{1}{2}h(n-1) = \delta(n) + \delta(n-2),$$
 (5.11)

This is the definition of h(n).

Solution: The following code plots Fig. 5.4. Note that this is the same as Fig. 5.2.

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/Code /hndef.py

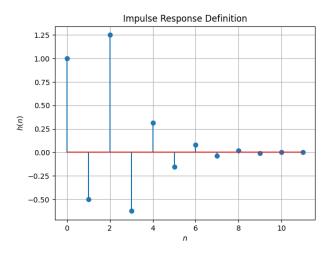

Fig. 5.4: h(n) from the definition

5.5 Compute

$$y(n) = x(n) * h(n) = \sum_{n = -\infty}^{\infty} x(k)h(n - k)$$
 (5.12)

Comment. The operation in (5.12) is known as *convolution*.

Solution: The following code plots Fig. 5.5. Note that this is the same as y(n) in Fig. 3.2.

wget https://github.com/AP-51/Signal-Processing/blob/main/Assignment-1/Code /ynconv.py

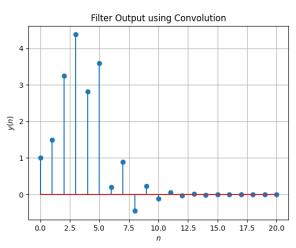

Fig. 5.5: y(n) from the definition of convolution

5.6 Show that

$$y(n) = \sum_{n=-\infty}^{\infty} x(n-k)h(k)$$
 (5.13)

Solution: From (5.12), we substitute k := n - k to get

$$y(n) = \sum_{k=-\infty}^{\infty} x(k) h(n-k)$$
 (5.14)

$$=\sum_{n-k=-\infty}^{\infty}x\left(n-k\right)h\left(k\right)\tag{5.15}$$

$$= \sum_{k=-\infty}^{\infty} x (n-k) h(k)$$
 (5.16)
